Section 1 — System Overview & Architecture

Friday Fraud Facts is a fully automated AI-powered weekly fraud intelligence newsletter system built for The Home Depot's Cybersecurity Fraud Prevention team. The system researches live fraud news, writes a polished branded newsletter in Troy Keur's voice, and delivers it to 56 internal partners every week.

1.1 How the Full System Works

Thursday noon CT	Google Apps Script (Phase 2) triggers automatically
Step 1	Claude AI searches 6 fraud intelligence source categories with live web search
Step 2	Selects 4–5 most relevant US stories, prioritizing identity fraud and peer retailers
Step 3	Writes the full newsletter in Troy's voice with editorial take on each story
Step 4	Emails formatted HTML draft to troy_a_keur1@homedepot.com for review
Step 5 (Phase 3)	Troy clicks  Approve & Send in the draft email
Step 6 (Phase 3)	Newsletter delivers to all 56 internal HD recipients automatically

1.2 Where Everything Lives

App (phone/browser)	troykeur-creator.github.io/FFF
App (Claude.ai)	Friday Fraud Facts conversation in Claude.ai
Phase 2 script	script.google.com → Friday Fraud Facts project
Phase 3 script	FridayFraudFacts_Phase3.gs — built and ready to deploy
Subscription form	docs.google.com/forms/d/e/1FAIpQLSeOp9jXyQFrFx...
Sub manager script	script.google.com → FFF Subscription Manager project
Source files	GitHub: troykeur-creator/FFF

Section 2 — Story Priority & Source Categories

Every generation follows a strict priority hierarchy applied in order when selecting and weighting stories.

2.1 Priority Tiers

Priority 1 — HIGHEST Identity & Account Fraud	Fraudulent account openings, ATO, synthetic identity fraud, credential stuffing, new account fraud, loyalty program fraud, identity theft in retail/e-commerce. Always include 1–2 stories.
Priority 2 — HIGH Peer Retailers	Lowe's, Menards, Ace Hardware, Walmart, Target, Costco, Sam's Club, Best Buy, Wayfair, Amazon. Home improvement and big box first.
Priority 3 — STANDARD Retail E-Commerce	Card-not-present, BOPIS fraud, returns fraud, promo abuse, checkout manipulation, marketplace fraud.
Priority 4 — BACKGROUND Broader Landscape	ORC, payment fraud, AI in fraud detection, regulatory changes affecting retail fraud programs.

2.2 Selection & Variety Rules

- Always include 1–2 identity fraud or ATO stories
- Always prioritize peer retailer stories
- United States only — international excluded
- Select 4–5 stories spanning at least 3 different fraud categories
- Tiebreaker: peer retailer beats identity fraud beats general fraud news
- Edition title and opening must be unique in style each week — no repetitive patterns

2.3 The 6 Search Categories

Category 1 Identity & ATO	Fraudulent account openings, ATO, synthetic identity, credential stuffing, new account fraud, loyalty program fraud
Category 2 Peer Retailers	Lowe's, Menards, Ace Hardware, Walmart, Target, Costco, Sam's Club, Best Buy, Wayfair, Amazon
Category 3 Retail E-Commerce	RH-ISAC, Retail Dive, NRF, RILA, Pymnts.com
Category 4 Fraud & Cyber	KrebsOnSecurity, Dark Reading, BankInfoSecurity, SC Magazine
Category 5 Law Enforcement	DOJ, FBI, FTC, Secret Service US press releases
Category 6 Payments & Finance	Visa, Mastercard, FTC, FinCEN, CFPB

Section 3 — Phase 1: Using the App (Weekly Workflow)

Phase 1 is the manual generation workflow. Use this when you want to generate on demand, review before Phase 2 delivers, or access the history archive.

3.1 Opening the App

- Browser/phone: troykeur-creator.github.io/FFF
- Claude.ai: Find the Friday Fraud Facts conversation → scroll to the artifact

 Use Claude.ai version if GitHub Pages shows an error. Claude.ai is always the most up-to-date version.

3.2 Generating an Edition

1	Confirm the Edition # field shows the correct number. Edit manually if needed.
2	Click  Generate Edition.
3	Wait 60–90 seconds while Claude searches all 6 source categories and writes the draft.
4	Read through the full draft — check stories, tone, takeaway, and punchy closing line.
5	If unsatisfactory, click  Regenerate for a fresh set of stories. Edition number does not change on regenerate.

3.3 Copying to Outlook

1	Click  Copy as Email. Button turns green with '✓ Copied!' when successful.
2	Open Outlook on your laptop → New Email.
3	Click inside the email body to place cursor.
4	Press Ctrl+V to paste. Full branded newsletter appears with all formatting.
5	Add recipients and subject line. Suggested: Friday Fraud Facts Edition #41 [Theme]
6	Review once more and send.

 Copy as Email works best on Chrome or Edge on a Windows laptop. Android/iPhone may fail — use Save as PDF on mobile.

3.4 Complete Thursday Checklist

- ☐ Open app on laptop (GitHub Pages or Claude.ai)
- ☐ Confirm edition number
- ☐ Click ✂ Generate Edition — wait 60–90 seconds
- ☐ Review: stories relevant? tone sounds like Troy? takeaway lands?
- ☐ Regenerate if needed
- ☐ Click 📄 Copy as Email
- ☐ Outlook → New Email → click body → Ctrl+V
- ☐ Add recipients and subject line → Send

Section 4 — Understanding the Email Output

4.1 Email Sections — Top to Bottom

Orange Header	HD branding, 'Friday Fraud Facts' at 36px, edition number, week date, team badge logo at 150px top-right.
Edition Title Block	Bold white-background block with the week's unique catchy subtitle. Different style every week.
Opening Note	2–3 sentences written as Troy. Varies in style every week — never opens the same way twice.
Story Cards	4–5 cards with color-coded badge, bold headline, 3–4 sentence summary with Troy's editorial take.
HD Relevance	Navy (#1A2744) background callout at bottom of each card connecting story to Home Depot specifically.
This Week's Takeaway	Dark background with 2-sentence insight + punchy bold italic orange closing line.
Signature Block	Navy (#1A2744) with orange border. Troy Keur / Sr. Manager Customer Identity Trust / The Home Depot.
Footer	'Friday Fraud Facts · Internal Publication · Drafted with AI assistance and reviewed by Cyber Fraud Prevention Team.'

4.2 Category Color Codes

Retail Fraud	#E85D26 — Deep orange
E-Commerce	#1A6FBF — Blue
Account Takeover	#7C3AED — Purple
Returns Abuse	#B45309 — Amber
Organized Retail Crime	#DC2626 — Red
Payments & Cards	#065F46 — Dark green
AI & Fraud Tech	#0E7490 — Teal
Regulatory	#374151 — Dark grey

Section 5 — App Features Reference

5.1 Generate Edition

Triggers full research and writing cycle across all 6 source categories. Takes 60–90 seconds. Auto-saves headlines to deduplication memory after each successful generation.

5.2 Copy as Email

Copies the full newsletter as rich HTML. Paste into Outlook with Ctrl+V — all formatting preserved. Works best on Chrome/Edge on Windows laptop.

5.3 Save as PDF

Opens print-ready version in new browser tab. Press Ctrl+P → Save as PDF. Works on both laptop and mobile.

5.4 Regenerate

Re-runs full generation producing a different set of stories. Edition number does not change on regenerate.

5.5 History Archive

Appears after first generation. Opens full-screen archive of all past editions. Browse, preview, and re-copy any past edition. Stores up to 52 editions in browser localStorage.

5.6 Edition Number Field

Manually controlled. Type any number. Persists in browser. Does not auto-increment.

5.7 Deduplication Memory

Stores past 8 editions' headlines in localStorage. Prevents repeating topics, companies, or fraud types. Persists across browser sessions on the same device and browser.

5.8 Auto Model Selector

Queries Anthropic Models API at runtime. Selects best available model from fallback chain: claude-sonnet-5 → claude-sonnet-4-6 → claude-sonnet-4-5 → claude-opus-4-8 → claude-haiku-4-5. Never breaks due to model deprecation.

Section 6 — Phase 2: Thursday Auto-Draft (Live)

Phase 2 is fully operational. Every Thursday at noon CT a Google Apps Script automatically generates the edition and emails the formatted HTML draft to troy_a_keur1@homedepot.com.

6.1 What You Receive

- Subject: DRAFT READY: Friday Fraud Facts — Week of [Date]
- Full branded HTML newsletter — same format as the manual generator
- Arrives within 2–3 minutes of noon CT every Thursday
- Review, edit in Outlook if needed, forward to your team DL

6.2 Script Location

- Go to script.google.com
- Open the Friday Fraud Facts project
- Functions: `sendFraudFacts` (main) | `setupWeeklyTrigger` (schedule)

6.3 If the Thursday Email Doesn't Arrive

1	Check script.google.com → Friday Fraud Facts → Execution log for errors.
2	Check your Gmail Sent folder to confirm if it sent.
3	Check your HD Outlook junk/spam folder.
4	If execution log shows an error, copy it and bring it to Claude — will be fixed quickly.
5	To manually trigger: change dropdown to <code>sendFraudFacts</code> → click Run.

Section 7 — Phase 3: Approve & Send (Pending Deploy)

Phase 3 script is fully built. It needs to be deployed as a Web App in Google Apps Script to activate the Approve & Send button in your Thursday draft emails.

7.1 What Phase 3 Does

- Thursday draft email includes a green  Approve & Send button and a  Edit First button
- Clicking Approve & Send delivers the final newsletter to all 56 recipients automatically
- Clicking Edit First opens Gmail drafts for manual editing before sending
- Sends from your Gmail as: Troy Keur | HD Fraud Prevention
- Uses BCC — recipients do not see each other's addresses

7.2 Deploying Phase 3

1	Go to script.google.com → open Friday Fraud Facts project.
2	Replace the existing script with the contents of <code>FridayFraudFacts_Phase3.gs</code> .
3	Ensure your <code>ANTHROPIC_KEY</code> is correctly set on line 1.
4	Click Deploy (top right) → New deployment.
5	Click the gear icon → select Web app.
6	Set Execute as: Me. Set Who has access: Anyone with Google Account.
7	Click Deploy. Copy the web app URL provided.
8	Run <code>setupWeeklyTrigger</code> to refresh the schedule.
9	Test: run <code>sendFraudFacts</code> → check HD Outlook → click Approve & Send → confirm delivery to recipients.

Section 8 — Subscription Manager

The subscription manager handles new requests to join the distribution list. Troy maintains full control — no one is added without explicit approval.

8.1 How It Works

1	Someone goes to the subscription form and fills in their name, HD email, and team.
2	Troy receives an approval email with ✓ Approve & Add and ✕ Deny buttons.
3	Clicking Approve sends the requester a branded welcome email from Troy automatically.
4	Troy then adds their email to the RECIPIENTS array in the Phase 3 script.
5	Clicking Deny logs the denial with no email sent to the requester.

8.2 Subscription Form Link

Share this with anyone who should have access to subscribe:

https://docs.google.com/forms/d/e/1FAIpQLSeOp9jXyQFrFwGcyu9DjXZ2s5xcbkeyPCwRX4dMmc_vpt4pA/viewform

8.3 Script Location & Web App URL

- script.google.com → FFF Subscription Manager project
- Web App:
<https://script.google.com/macros/s/AKfycbwjJdquZyla7H6Jimqogruul37a2J4B4NAqDrRNYPceDmpq7uAysSImvKKK3bT3Jt-6/exec>

Section 9 — Recipient List Management

56 internal HD recipients as of July 2026. All @homedepot.com addresses. Stored in the RECIPIENTS array at the top of FridayFraudFacts_Phase3.gs.

9.1 Adding a Recipient

1	Go to script.google.com → Friday Fraud Facts project.
2	Find the RECIPIENTS array at the very top of the script.
3	Add the new email address in single quotes followed by a comma on a new line.
4	Press Ctrl+S to save.

9.2 Removing a Recipient

1	Go to script.google.com → Friday Fraud Facts project.
2	Find the email in the RECIPIENTS array.
3	Delete that entire line including the comma.
4	Press Ctrl+S to save.

9.3 New Subscription Requests

Direct people to the Google Form (Section 8.2). When they submit, you receive an approval email. Approve → welcome email sent automatically → manually add their email to the RECIPIENTS array.

 All recipients must have @homedepot.com email addresses. This is enforced by the subscription form.

Section 10 — Troubleshooting

10.1 Generation Errors

JSON parse error	Click  Regenerate. Special characters occasionally break the parser. A second attempt resolves it almost every time.
model: claude-sonnet-X (model error)	The model string is deprecated. Update to claude-sonnet-5 in the script and in index.html on GitHub.
Failed to fetch (no model shown)	Network issue or API outage. Check status.anthropic.com . Try mobile data instead of WiFi.
Generation hangs over 3 minutes	Refresh the page, reopen the artifact, and try again.

10.2 Copy to Email Issues

Failed to copy	Use Chrome or Edge on a Windows laptop. Android/iPhone clipboard restrictions prevent HTML copy.
Paste shows plain text	Use Ctrl+V, not right-click Paste Special. Click inside the email body before pasting.
Formatting broken	Paste into a brand new blank email, not a reply or forward.
Logo not in Outlook	Adjust File > Options > Trust Center > Automatic Download settings.
Logo not in Gmail	Gmail blocks embedded images. Host logo at imgur.com and update the app — ask Claude.

10.3 Phase 2 Issues

Thursday email not arriving	Check execution log in Apps Script. Check Gmail Sent. Check HD Outlook junk.
Script error	Copy the error and bring it to Claude — will be fixed quickly.
API key error	Verify at console.anthropic.com . Ensure key is inside single quotes on line 1 of script.

10.4 Memory & Edition Issues

Edition number wrong	Click Edition # field and type correct number. Saves automatically.
-----------------------------	---

History/memory lost	Clearing browser data resets localStorage. Say 'reset topic index to edition X' in Claude.
Repeated story topics	Memory builds over time. Regenerate for fresh stories.

Section 11 — Customization Guide

All changes are made by returning to the Friday Fraud Facts conversation in Claude.ai. Full build context preserved — changes take minutes.

11.1 Things You Can Change by Asking Claude

Add/remove a news source	'Add [source] to the search categories'
Change story priority	'Give more weight to [fraud type]'
Adjust voice or tone	'The writing feels too formal — make it warmer'
Update your title	'Update my title to [new title]'
Change email colors	'Change the navy accent to [color]'
Update the footer	'Change the footer to say [text]'
Reset topic memory	'Reset the topic index and set edition to [number]'
Replace the logo	Upload new image and say 'Replace the logo with this'
Add Viva Engage	'Add Viva Engage posting to Phase 3'
Update model list	'Update the model fallback list with new models'
Add email section	'Add a [section name] section after stories'

11.2 Things That Require IT or a Developer

- Sending from an HD corporate email instead of Gmail
- Connecting to HD internal systems or SharePoint
- Active Directory / SSO integration for the subscription form

Section 12 — Technical Reference

12.1 Technology Stack

Frontend	React 18 + Babel Standalone — single HTML file, no build step required
AI Model	claude-sonnet-5 (Anthropic) with automatic fallback chain
Max Tokens	4,000 per generation
Web Search	Anthropic web_search tool — live internet access at generation time
Email Format	Table-based HTML with MSO conditional comments — Outlook optimized, 620px
Logo (App)	Base64 PNG, 300px encoded, displayed at 140×140px
Logo (Email)	Base64 PNG, 200px encoded, displayed at 150×150px
Storage	Browser localStorage: edition number + 8-edition dedup memory + 52-edition history
Automation	Google Apps Script — runs on Google infrastructure, no server needed
Hosting	GitHub Pages — troykeur-creator.github.io/FFF
API Cost	~\$0.25–\$0.50 per generation (~\$1–2/month at weekly cadence)

12.2 Model Fallback Chain

1st choice	claude-sonnet-5 — current best (June 2026)
2nd choice	claude-sonnet-4-6 — previous Sonnet
3rd choice	claude-sonnet-4-5 — older Sonnet
4th choice	claude-opus-4-8 — Opus fallback if all Sonnets deprecated
5th choice	claude-haiku-4-5 — last resort, always available

12.3 Privacy & Security

- No user data stored on external servers
- Content generated fresh each week via direct API call
- Anthropic API key stored in Google Apps Script environment only
- No HD customer data, proprietary data, or internal systems accessed
- AI content reviewed by Troy Keur before distribution
- Internal HD only — @homedepot.com enforced on subscription form

12.4 Getting Help

Open the Friday Fraud Facts conversation in Claude.ai and describe what you need. Examples:

- 'The copy button stopped working'
- 'Add a new search source'
- 'Deploy Phase 3'
- 'The stories aren't relevant enough'
- 'Reset topic memory to edition 42'
- 'Add Viva Engage to Phase 3'
- 'Update the model fallback list'
